SOLACE
CARE

Seeker guide

Every flow a person looking for support goes through in the Solace Care app, as a guest or with an account.

For	Solace staff who support, train or test with seekers: Support, Operations, QA and the clinical team.
Covers	15 flows, step by step, with the screens, the rules behind each step, the messages people receive and what to do when something goes wrong.
Built from	The screen designs in design/screens, the decision log (docs/decisions.md, D1 to D60) and the specs in docs/specs, as built on 21 October 2026.

How to read this guide

This guide follows a seeker through the app, from the first time they open it to their sessions, tracking, homework and privacy choices. Each flow has the screens as designed, the steps in order, the rules the system applies at each step, the messages the person receives, and what to do when something goes wrong.

Screens. The pictures are the design renders. They use fallback fonts and a dashed box where the logo goes; the app itself uses Bricolage Grotesque and Figtree and the real logo. Every screen also exists in French.

Numbers in brackets, such as [15] minutes, are settings with that default. Operations or a Super admin can change them in Settings and flags without a release. Numbers without brackets are fixed decisions.

Feature flags. Features from later phases are off until staff switch them on in Settings and flags. Each flow says which flag it needs, if any.

Two languages. The app language (English or French) and the session language are separate choices. Someone can use the app in French and be counselled in English.

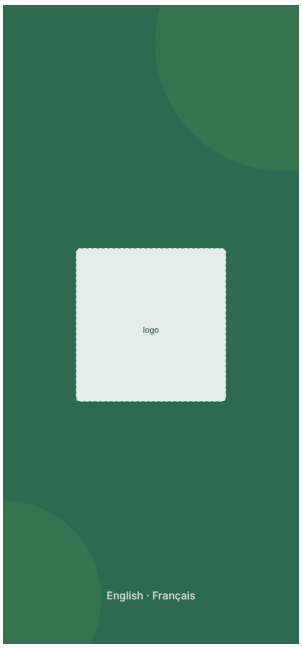

Flag	What it turns on	Default
trackTab	Tracking: the Track tab, logging, trends and recommendations	Off
healthCheck	The 3-minute health check and its matches	Off
aiAssist	AI wording of recommendations; the pre-session brief	Off
sessionScribe	The AI scribe choice in the waiting room	Off
companion	Homework on Home, the companion and the safety plan	Off
phoneDialIn	Joining a session by phone	Off
cardPayments	Paying by card	Off
onCallSpecialistCall	Talk to an on-call specialist in Urgent help	Off

FLOW 1

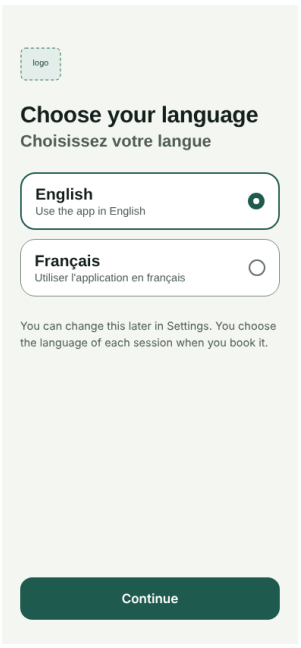

Opening the app for the first time

A new person chooses a language, sees three short intro screens, decides about reminders and lands on Welcome. Urgent help is one tap away from the first screen.

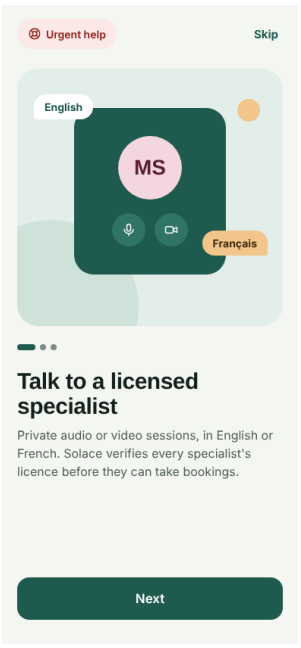

Who	Anyone who installs the app. No account is needed.
Screens	Splash, Choose your language, Intro 1 to 3, Turn on reminders, Welcome
Phase	1 · always on

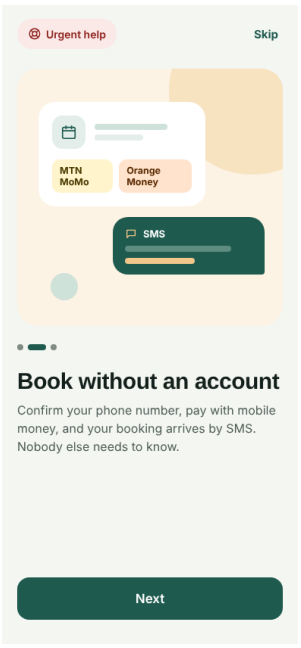

Splash

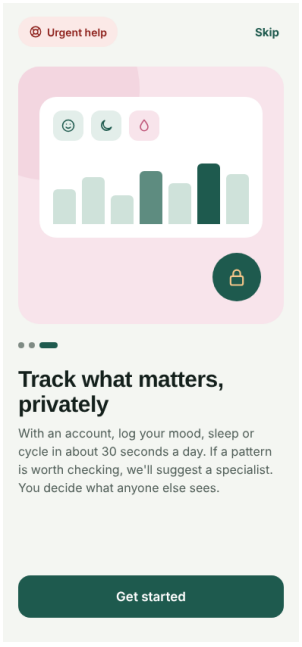

Choose your language

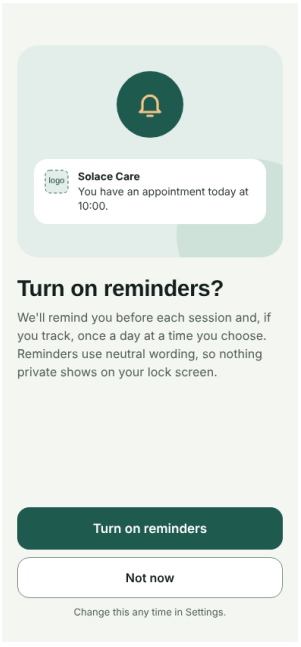

Intro 1: talk to a specialist

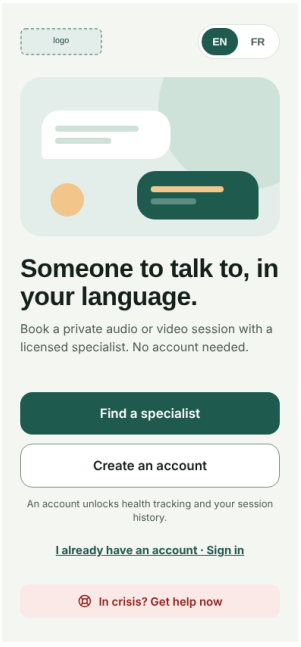

Intro 2: book without an account

Intro 3: track privately

Turn on reminders

Welcome

Step by step

1 **Choose a language**
English or Français. This is the app language only; the session language is chosen later, per booking. It can be changed any time in Settings.

2 **Read the three intro screens, or skip them**
Talk to a licensed specialist; Book without an account (phone number, mobile money, booking by SMS); Track what matters, privately. Skip and Get started both go to Welcome. The intro shows once.

3 **Decide about reminders**
Turn on reminders asks the phone's permission for notifications. Not now carries on; it can be changed in Settings. Reminders always use neutral wording, so nothing private shows on the lock screen.

4 **Welcome**
From here the person can find a specialist straight away (as a guest), create an account, or sign in. The Urgent help button is on Welcome and on every intro screen.

Rules behind this flow

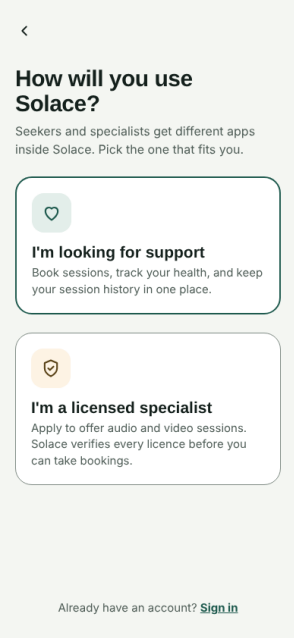

- The intro shows once per install, after the language choice.
- Urgent help works with no account and no connection: the emergency numbers are inside the app.

FLOW 2

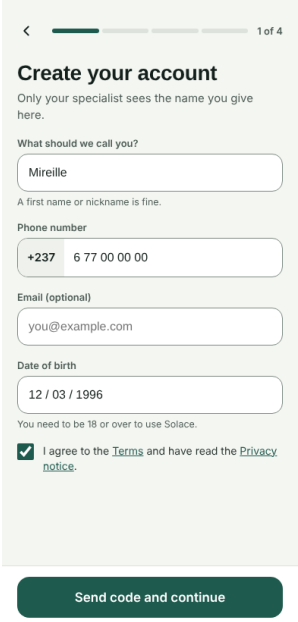

Creating an account

A seeker creates an account with a phone number and a one-time code, sets preferences, makes privacy choices and, when tracking is on, picks what to track. There are no passwords.

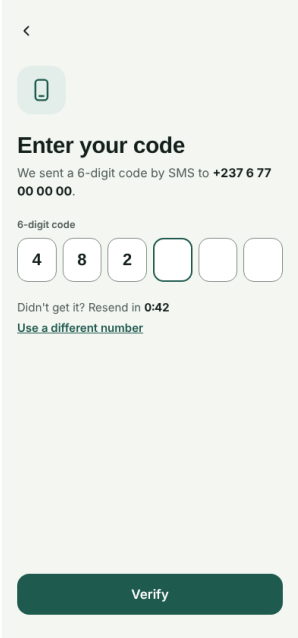

Who	Anyone 18 or over who wants their history, tracking and homework in one place.
Screens	Choose account type, Create your account (1 of 4), Enter your code, Make it yours (2 of 4), Your privacy, your call (3 of 4), What would you like to track? (4 of 4), You're all set
Phase	1; step 4 needs the trackTab flag

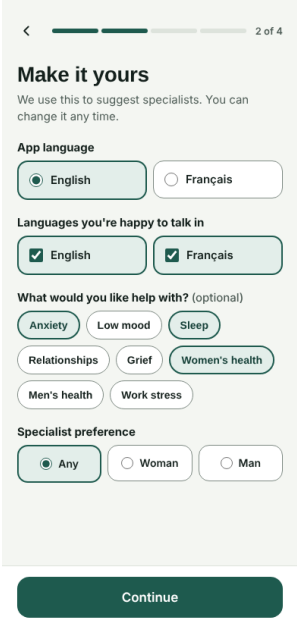

How will you use Solace?

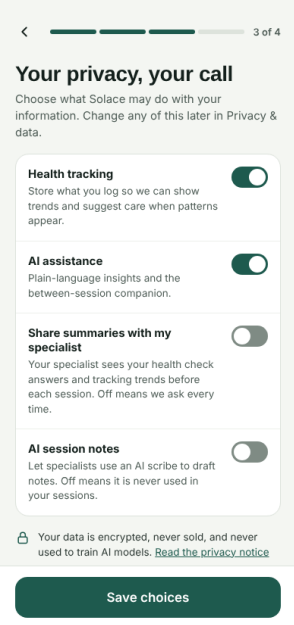

1 of 4: Create your account

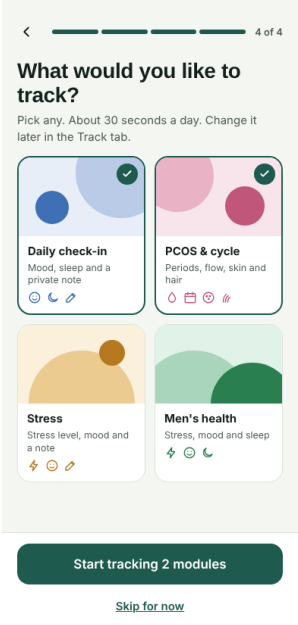

Enter your code

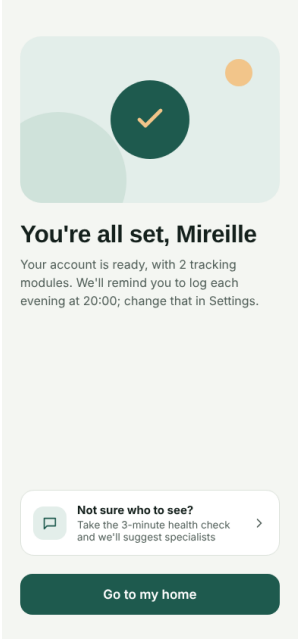

2 of 4: Make it yours

3 of 4: Privacy choices

4 of 4: What to track

You're all set

Step by step

1. **Choose I'm looking for support**
   Seekers and specialists get different apps inside Solace. Specialists follow the specialist guide.
2. **Give a name, phone number and date of birth**
   The name can be a first name or nickname; only the seeker's specialist sees it. Email is optional. The person must be 18 or over. They agree to the Terms and confirm they have read the Privacy notice.
3. **Enter the 6-digit code**
   Sent by SMS (or email, when they chose email). It expires in [10] minutes. Resend becomes available after a countdown; Use a different number goes back.
4. **Set preferences**
   App language; the languages they are happy to talk in; what they would like help with (optional, used to suggest specialists); a specialist preference (Any, Woman, Man). All of it can be changed later in Edit profile.
5. **Make privacy choices**
   Four switches, each a separate, versioned consent: Health tracking; AI assistance; Share summaries with my specialist (off means they are asked at each booking); AI session notes (off means the scribe is never used in their sessions). Every choice can be changed later in Privacy & data.
6. **Choose what to track (when tracking is on)**
   Shown only after a yes to Health tracking. Lists modules without an enrolment question; others are added later from the Track tab, where their question is asked. Skip for now is fine.
7. **You're all set**
   Shows the reminder time for tracking and offers the 3-minute health check. Go to my home opens the seeker app.

Rules behind this flow

- No passwords: every sign-in is a one-time code (D6).
- Bookings made earlier as a guest with the same phone number or email move into the new account automatically once the code proves it (D34).
- Health check answers taken as a guest on this phone are claimed by the account too (D55).
- Solace never asks for sex at birth. Tracking modules say who they are for, and the person chooses (D17).
- A consent can be withdrawn at any time; withdrawing stops the processing it covers from then on.

Messages people receive

When	Channel	Message (English)
Code requested	SMS	Solace: your code is {code}. It expires in [10] min. Never share it with anyone.

If something goes wrong

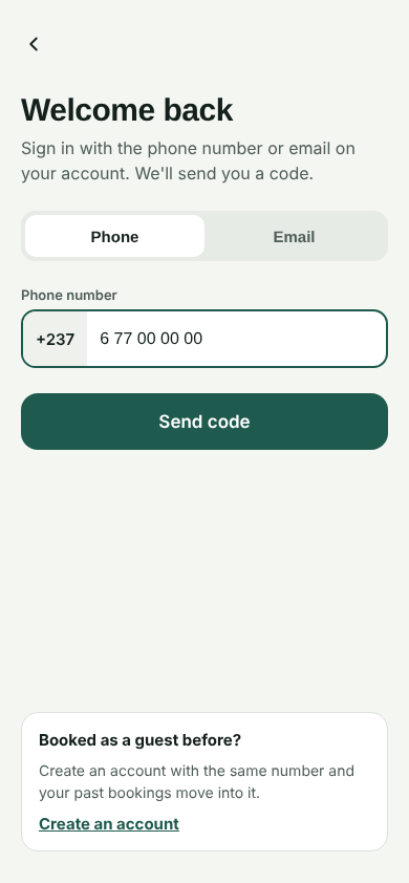

- **Wrong code:** the screen says so and lets them try again. After [3] wrong tries the code stops working and they ask for a new one.
- **No SMS:** check the number shown on the code screen; use Resend after the countdown, or Use a different number.
- **Under 18:** sign-up is refused. Point them to Urgent help if they are in distress; Solace does not serve minors.

FLOW 3

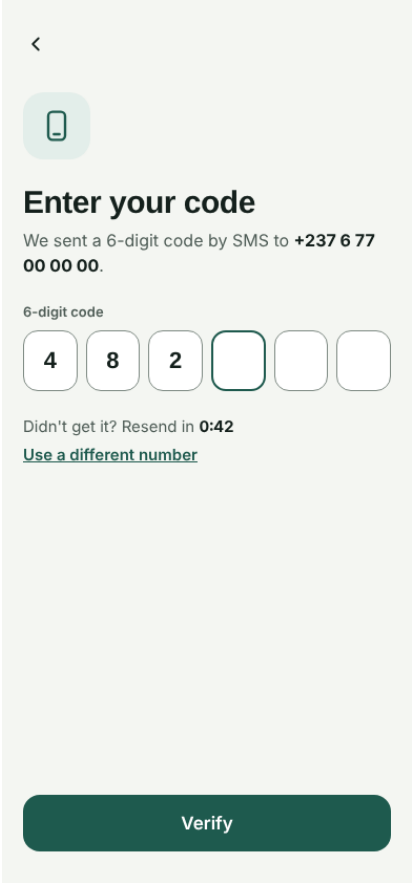

Signing in

A returning seeker signs in with the phone number or email on their account and a one-time code. The app opens the seeker or specialist shell according to the account.

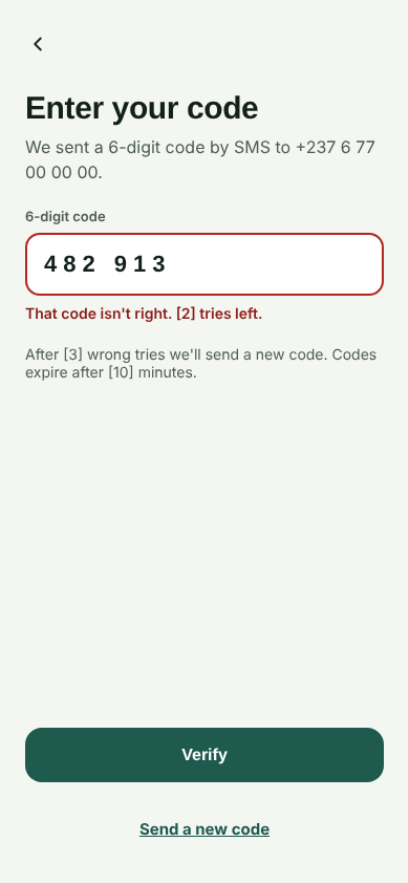

Who	Seekers and specialists with an account
Screens	Welcome back, Enter your code, Wrong code
Phase	1 · always on

Welcome back

Enter your code

Wrong code

Step by step

1. **Choose Phone or Email and enter it**
   Phone numbers start with +237.
2. **Enter the code**
   Same rules as at sign-up: 6 digits, [10] minutes, [3] tries.
3. **Land on Home**
   The app keeps the person signed in on this phone. Signing out (You tab) removes the session, any tracking waiting on the phone after it is sent, and the offline safety plan copy.

Rules behind this flow

- A person who booked as a guest before and now creates an account with the same number finds those bookings in their account.

If something goes wrong

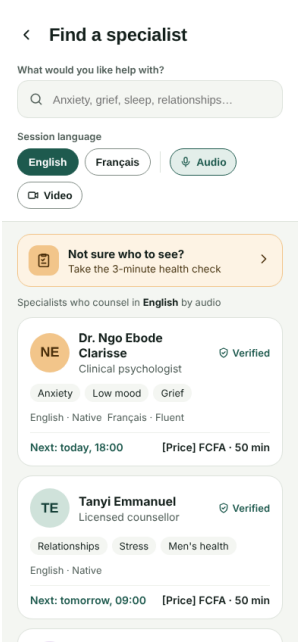

- **Someone else has access to the phone:** suggest App lock (PIN or fingerprint to open Solace) and Discreet notifications in Settings, so lock-screen messages show only "You have a reminder".

FLOW 4

Finding a specialist

The seeker searches by what they want help with, the session language and audio or video, then opens a specialist's profile to see their licence check, languages, sessions, prices and next free time.

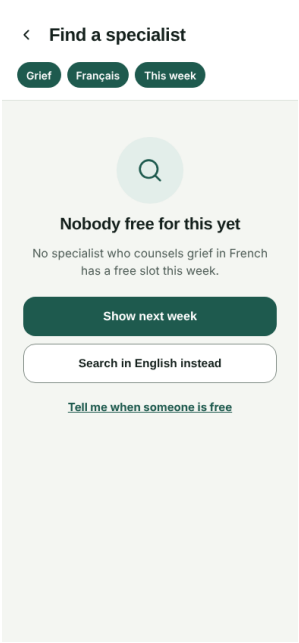

Who	Guests and registered seekers
Screens	Find a specialist, Loading, No specialists match, Specialist profile
Phase	1 · always on (the health check card needs healthCheck)

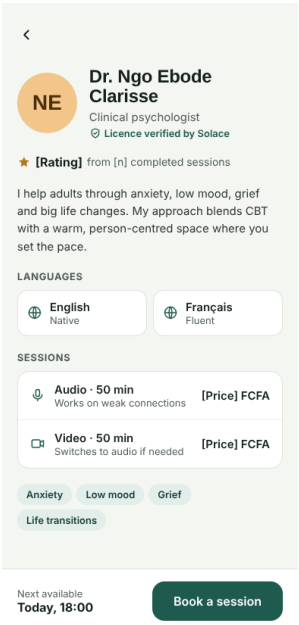

Find a specialist

Loading

No specialists match

Specialist profile

Step by step

1 **Pick filters**
What would you like help with (help topics), Session language, Audio or Video.

2 **Read the list**
Each card shows the name, profession, Verified, focus areas, languages with their verified level, the next free time, and the price for 50 minutes. Not sure who to see? opens the health check (when it is on).

3 **Open a profile**
The licence check, the rating (once there are enough ratings), the bio in the app language, languages and level, each session type with its price, focus areas and the next available time. Book a session starts booking.

Rules behind this flow

- Only approved specialists appear, verified at Professional level or above in the chosen session language, with an enabled session type and a bio in both English and French (D16, D31).
- A rating shows only once a specialist has [3] ratings, so one opinion is never shown as an average (D37).
- Prices are between [5,000] and [20,000] FCFA per session (D27).
- Audio sessions use less data and survive weak connections; video steps down to audio when the connection drops.

If something goes wrong

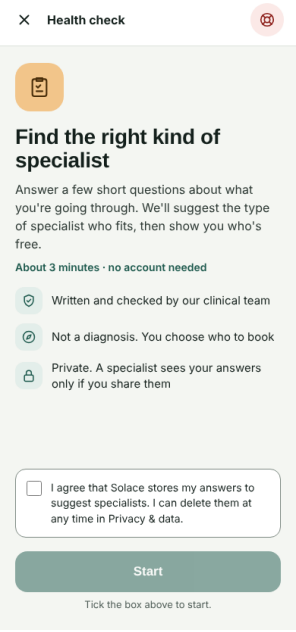

- **No one matches:** widen the language (some specialists work in both) or switch between audio and video; the empty state suggests this.
- **Could not load:** the error state offers Try again; search needs a connection.

FLOW 5

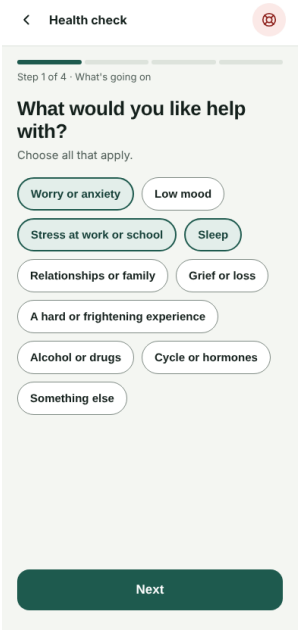

Taking the health check

A short, clinician-built questionnaire suggests the type of specialist that fits, then lists who is free. It is scored by rules, never by AI, and it is not a diagnosis. Anyone can take it, without an account.

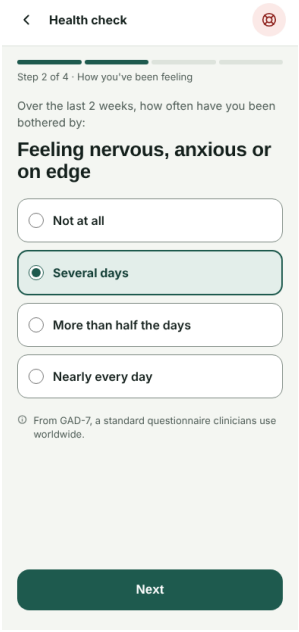

Who	Guests and registered seekers
Screens	Find the right kind of specialist, Step 1 to 4, Urgent help (safety answer), Your matches
Phase	2 · needs the healthCheck flag

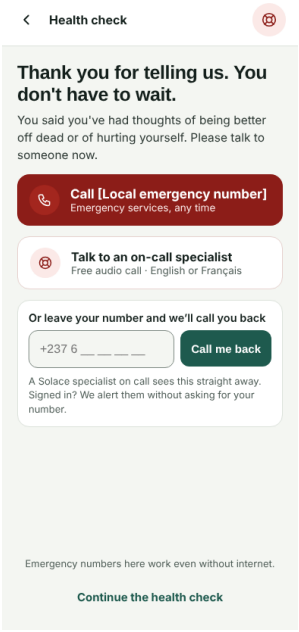

Start

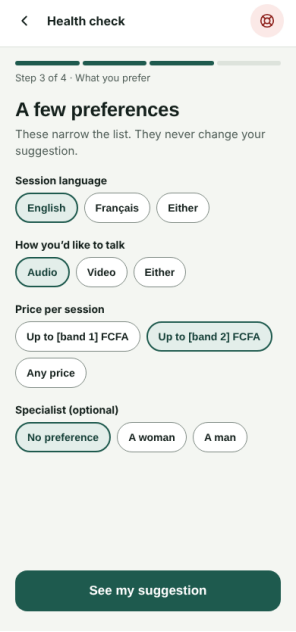

Step 1: what's going on

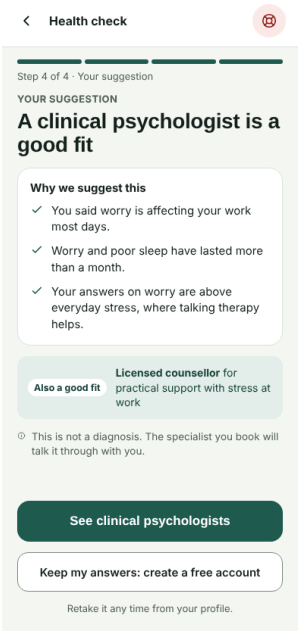

Step 2: a screener question

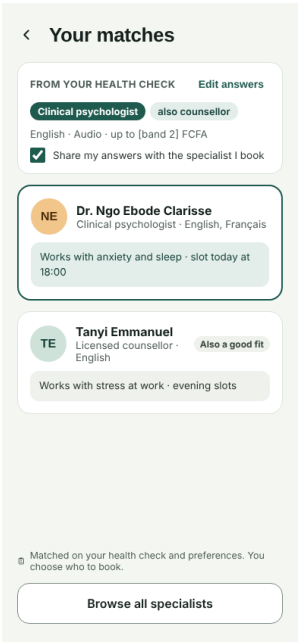

Urgent help after the safety question

Step 3: preferences

Step 4: your suggestion

Your matches

Step by step

1. **Agree and start**
   The person ticks that Solace may store their answers to suggest specialists (the HEALTH_CHECK consent). They can delete the answers any time in Privacy & data.

2. **Step 1: what's going on**
   Topics (choose all that apply), how long it has been going on, and how much it affects daily life.

3. **Step 2: how you've been feeling**
   The safety question first, then the standard screeners PHQ-2 and GAD-2. If the first two items of either add up to 3 or more, the rest of that screener follows (PHQ-9 or GAD-7). Then a question about medicine. The wording is the official published wording and cannot be edited.

4. **Step 3: preferences**
   Session language, audio or video, price band and an optional specialist preference. These narrow the list; they never change the suggestion.

5. **Step 4: your suggestion**
   The kind of professional who fits, with the reasons in plain words, and possibly an "Also a good fit". It always says this is not a diagnosis.

6. **Matches**
   Specialists of the suggested kind first, then the second one, filtered by the preferences and ranked by how well their focus areas match, then the soonest slot, then rating. Share my answers with the specialist I book is a choice per booking.

Rules behind this flow

- **Safety rule, locked in every version:** any answer other than "No" to the safety question, or PHQ-9 item 9 above 0, stops the check and opens Urgent help at once (D9).
- For a signed-in seeker an alert goes to the crisis queue straight away. A guest can leave a number for a call back, which raises the alert with that number. The person may then continue the check.
- No AI reads the answers. Scoring is rules written by clinicians; ties follow the clinicians' order; a second specialty within [1] point shows as "Also a good fit" (D8, D55).
- Answers are encrypted at rest. A specialist sees them only when the seeker ticked Share for that booking, and every read is recorded in the audit log.
- Guest answers stay on this phone's anonymous token and are deleted after [30] days unless an account claims them. An answer set older than [90] days asks for a retake.
- Price bands are settings: up to [15,000] and [25,000] FCFA by default.

If something goes wrong

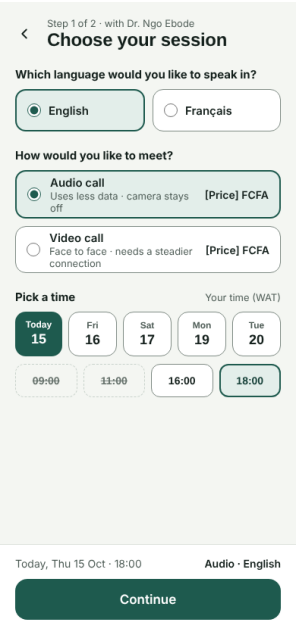

- **The person is in danger:** the Urgent help screen lists the local emergency numbers, which work without internet. The crisis team sees the alert; do not wait for them if someone is at immediate risk.
- **They want a different suggestion:** the suggestion is not binding. Browse all specialists is always available, and they can retake the check.

FLOW 6

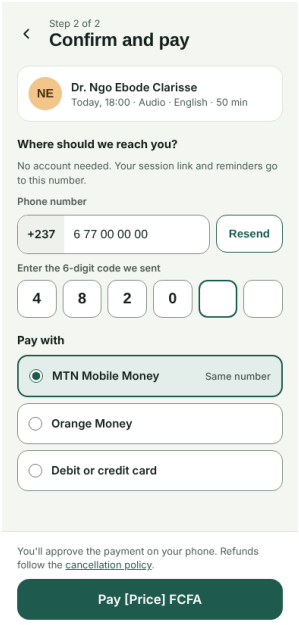

Booking and paying

The seeker picks the session language, audio or video and a time, then pays with MTN Mobile Money or Orange Money. The time is held for 10 minutes while they approve the payment on their phone.

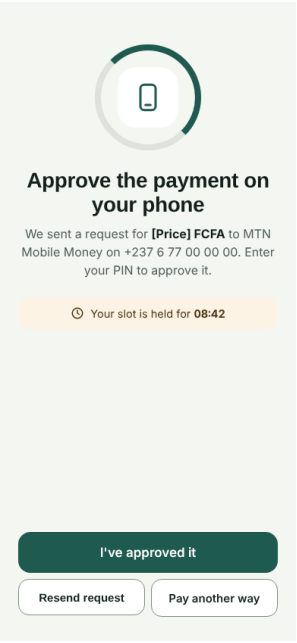

Who	Guests and registered seekers
Screens	Choose your session, Confirm and pay, Approve the payment, The payment didn't go through, You're booked
Phase	1 · cards need the cardPayments flag

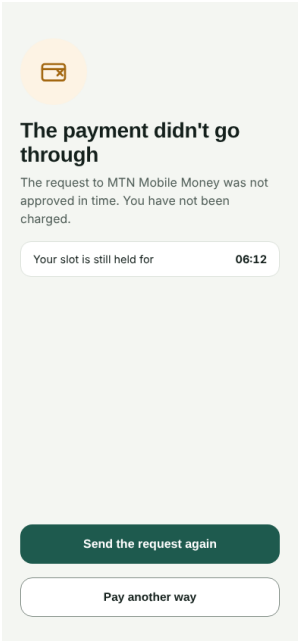

Step 1: choose your session

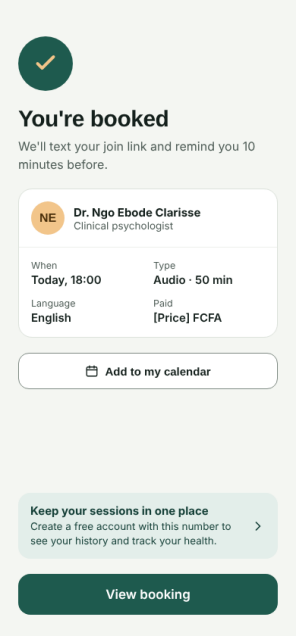

Step 2: confirm and pay

Approve on your phone

Payment not completed

You're booked

Step by step

1. **Choose the session**
   The session language (only languages the specialist is verified in at Professional level or above), Audio call or Video call with its price, then a day and a time. Times show in the person's own time zone.
2. **Continue**
   The time is held for exactly 10 minutes for this person, so nobody else can take it while they pay.
3. **Confirm and pay**
   A guest first proves their phone number with a 6-digit code (see Booking as a guest). Then MTN Mobile Money or Orange Money; the payment phone is the same number unless they change it.
4. **Approve on the phone**
   The mobile money app asks for the PIN. The screen shows the countdown of the hold. I've approved it checks again; Resend request sends a new one; Pay another way switches wallet.
5. **You're booked**
   The booking is confirmed when the payment arrives. Add to my calendar is offered. Guests are offered a free account with the same number.

Rules behind this flow

- The booking goes PENDING_PAYMENT → CONFIRMED when paid. Not paid within the hold, it EXPIRES and the time is released (D32).
- The money is captured at confirmation and held. It is released to the specialist only after the session completes (D13).
- Each booking keeps the cancellation policy version in force when it was made (D33).
- Mobile money webhooks are signature-checked, and a payment is never counted twice.

Messages people receive

When	Channel	Message (English)
Booking confirmed	Push	Appointment booked: {date} at {time}.
Booking confirmed (guest)	SMS	Solace: your appointment on {date} at {time} is confirmed. Details and join link: {link}
Payment received	Push	Payment received: {amount} FCFA. Your receipt is in the app.
Payment not completed	Push / SMS	Payment not completed. Your time is held until {time}.
Receipt	Email	Your Solace receipt, {date}. Thank you for your payment of {amount} FCFA.

If something goes wrong

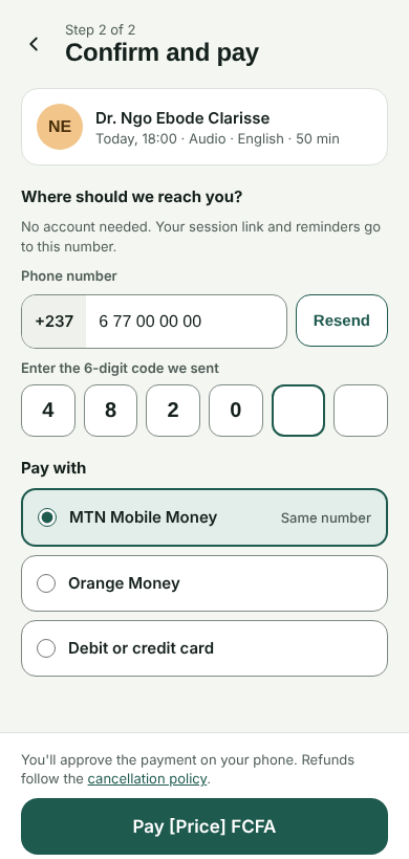

- **Payment not approved in time:** nothing was charged. The time stays held until the hold ends; send the request again or pay another way.
- **Charged but no booking:** look the booking up in the admin portal (Bookings, by phone or BK- reference). If the payment arrived after the hold expired, Finance handles it from Payments.
- **Card payments** are off until the card adapter is switched on.

FLOW 7

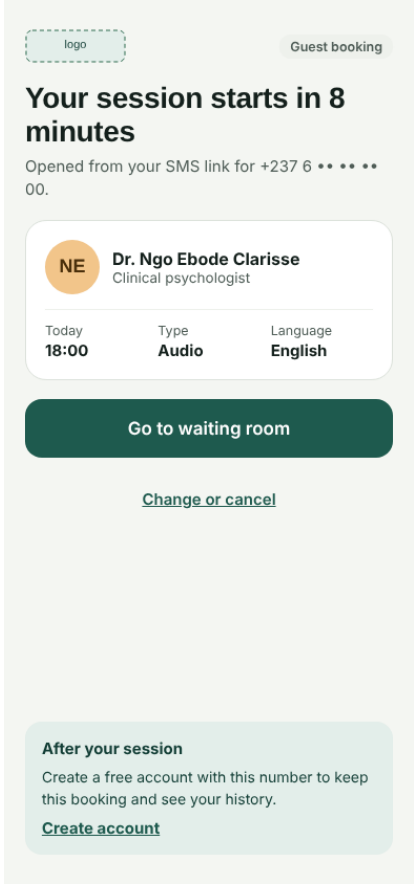

Booking as a guest

Someone can book and attend a session without an account: they prove their phone number with a code, pay with mobile money, and everything about the booking arrives by SMS with a private link.

Who	Anyone, no account
Screens	Confirm and pay (guest), Guest booking opened from the SMS link
Phase	1 · always on

Where should we reach you?

Guest booking from the SMS link

Step by step

1. **Give a phone number**
   On Confirm and pay: "No account needed. Your session link and reminders go to this number."
2. **Enter the 6-digit code**
   Sent by SMS. It is valid [10] minutes with [3] tries. The code check creates the booking.
3. **Pay**
   As in Booking and paying.
4. **Open the booking from the SMS**
   The link opens Guest booking: the specialist, the time, the type and language, Go to waiting room (from 10 minutes before) and Change or cancel.

5 **After the session**
They are offered a free account with the same number to keep the booking and see their history.

Rules behind this flow

- A guest has no account. Core gives them a random token scoped to this one booking, stored hashed, valid until a day after the session (D34).
- Every SMS stays within 160 characters, and French SMS avoid accented letters.
- Guests cannot share health check answers or use tracking, homework or the AI scribe; those need an account.
- A guest's phone number is deleted [12] months after their last booking (D40).

Messages people receive

When	Channel	Message (English)
Joining opens	SMS	Solace: your appointment starts at {time}. Join here: {link}
Specialist cancelled	SMS	Solace: your appointment on {date} was cancelled by the specialist. Full refund on its way. New time: {link}

If something goes wrong

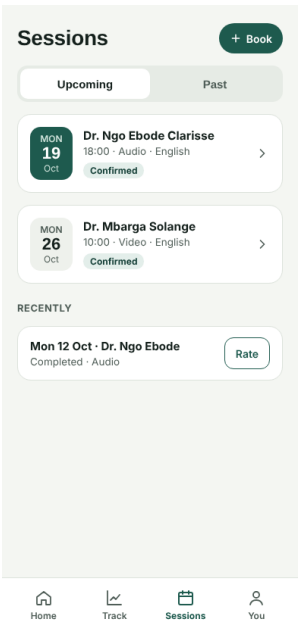

- **Lost the SMS:** Support finds the booking in People by phone number. Each new SMS carries a fresh link.

FLOW 8

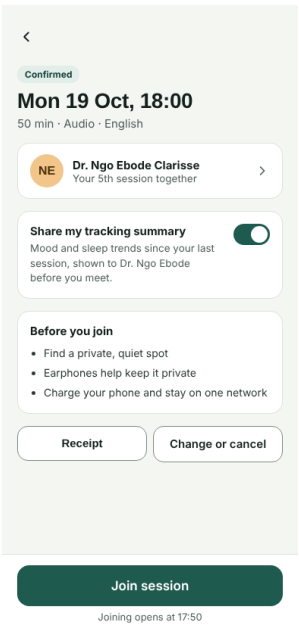

Managing a booking

From My sessions the seeker sees upcoming and past sessions, opens one for its details, and can reschedule to another time with the same specialist or cancel with the refund the policy gives.

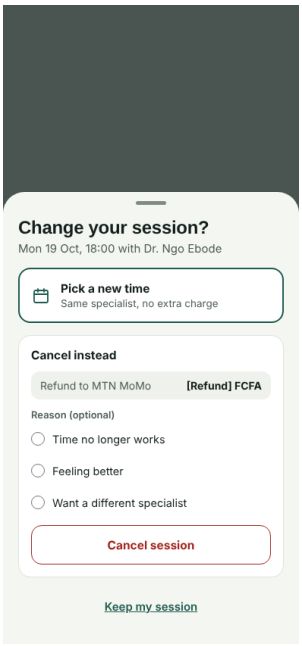

Who	Registered seekers (guests use the same screens from their SMS link)
Screens	My sessions, Session details, Change or cancel
Phase	1 · always on

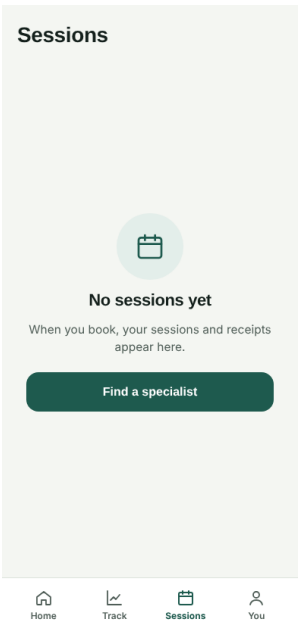

My sessions

Session details

Change or cancel

No sessions yet

Step by step

1. **Open My sessions**
   Upcoming and Past. Past sessions waiting for a rating show Rate.

2. **Open a session**
   Time, length, audio or video, language, the specialist, how many sessions together, tips for before joining, the receipt. Join session is enabled from 10 minutes before ("Joining opens at 17:50").

3. **Reschedule**
   Pick a new time with the same specialist, at no charge. Up to [2] reschedules, at least [2] hours before the start.

4. **Or cancel**
   The screen shows the refund amount before they confirm. An optional reason helps the team.

5. **Share my tracking summary (tracking on)**
   A switch on an upcoming session: what the seeker logs from now on is shown to this specialist before they meet (in the pre-session brief). Notes stay private. Turning it off stops sharing at once.

Rules behind this flow

- **Refunds by the default policy (D33):** full refund [24] hours or more before the start; half between [24] and [2] hours; none under [2] hours. A seeker no-show gets nothing back; a specialist no-show, everything. The booking's own policy version applies.
- The refund is proposed by the system and approved by one Finance member before it is sent to the wallet that paid (D14, D35).
- If the specialist cancels, the full price comes back and the seeker can pick a new time.
- Sharing is forward-only: the specialist sees only what is logged after the switch was turned on, and only while they have a live booking with the seeker. Every read is audited (D52).

Messages people receive

When	Channel	Message (English)
Seeker cancelled	Push / SMS	Appointment cancelled. A refund of {amount} FCFA is on its way.
Rescheduled	Push / SMS	Appointment moved to {date} at {time}.
Refund sent	Push / SMS	Solace: a refund of {amount} FCFA has been sent to your {method} account.
Day before	Push	Reminder: appointment tomorrow at {time}.

If something goes wrong

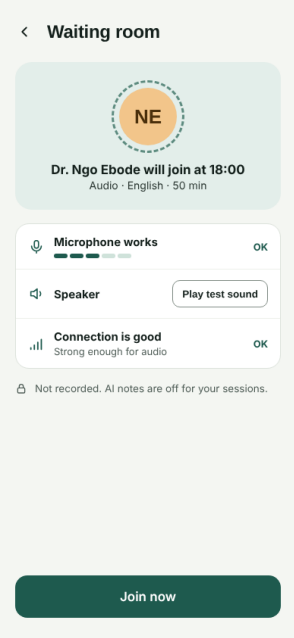

- **Outside the reschedule window:** the app does not allow it. Support cannot book or move a session for someone in v1; they talk the person through cancelling and booking again.
- **Refund not arrived:** Payments in the admin portal shows whether it waits for Finance's approval or has been sent.

FLOW 9

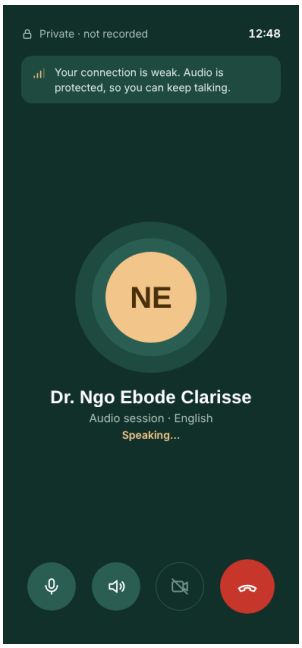

Joining the session

From 10 minutes before the start, the seeker enters the waiting room, which checks the microphone and the connection, then joins the audio or video call. A dropped call keeps its place for 2 minutes.

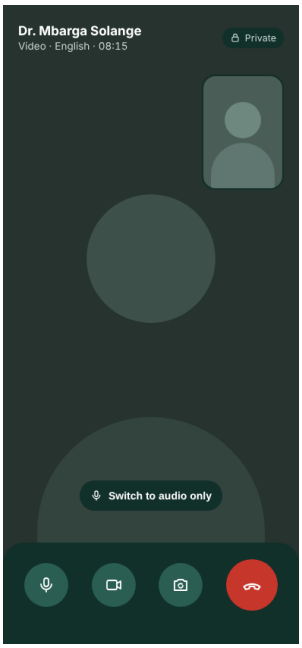

Who	Guests and registered seekers
Screens	Waiting room, Audio session, Video session, Microphone blocked, Reconnecting
Phase	1; the AI scribe choice needs sessionScribe; joining by phone needs phoneDialIn

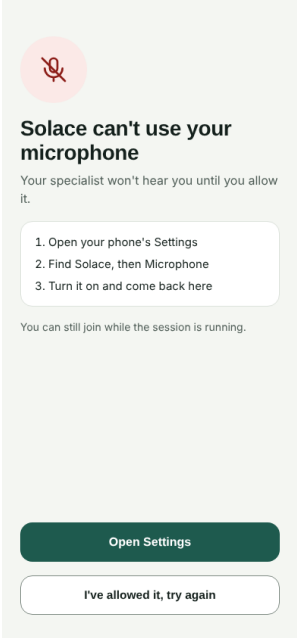

Waiting room

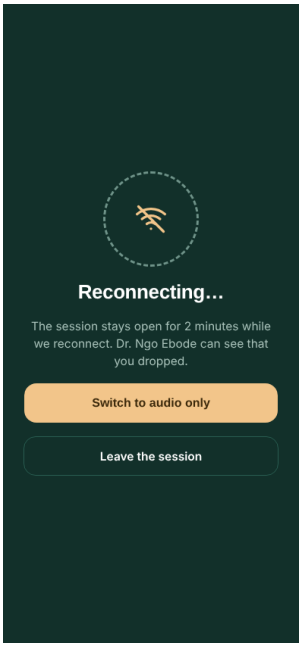

Audio session

Video session

Microphone blocked

Reconnecting

Step by step

1. **Open the waiting room**
   From Home, My sessions or the SMS link, from 10 minutes before the start until 15 minutes after the end.
2. **Checks**
   Microphone works; Connection is good. A slow connection gets advice and the suggestion to use audio.
3. **The AI scribe line**
   Normally: "Not recorded. AI notes are off for your sessions." When the scribe is on and both people consented, a switch shows instead: the seeker can turn the scribe off for this session only. Turning it off during the session stops the recording at once.
4. **Join by phone (when on)**
   "No data? Join by phone": a number and a 6-digit PIN for this booking. Normal call rates apply. The PIN works only while joining is open.
5. **Join now**
   Audio sessions never use the camera. Video starts low and steps up; if bandwidth stays too low it offers audio only, and switches by itself below a floor.
6. **If the connection drops**
   Reconnecting keeps the session open for 2 minutes. The specialist sees that the seeker dropped.

Rules behind this flow

- The session starts when both people are in the room. Neither the specialist nor the media server learns the seeker's name from the call itself.
- A session is never recorded by default. Audio for the scribe is recorded only when the flag is on, the seeker is registered, both consented to AI session notes, and neither turned it off for this session (D57).
- **No-shows:** [15] minutes after the start, if only one person ever joined, the booking becomes a no-show by the other and the policy refund follows. If neither joined, Support resolves it (D36).

Messages people receive

When	Channel	Message (English)
Joining opens	Push	Your appointment starts at {time}. You can join now.

If something goes wrong

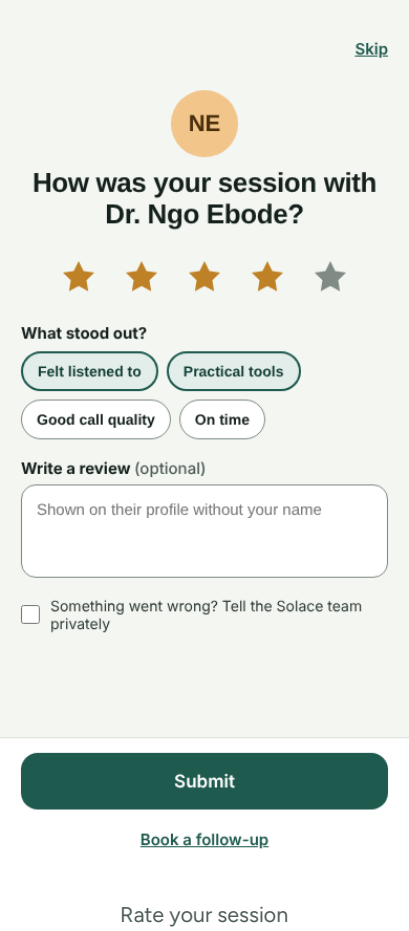

- **Microphone blocked:** the screen walks them to the phone's Settings to allow it. They can still join while the session is running.
- **Weak connection on video:** Switch to audio only. On no data at all, use join by phone if it is switched on.
- **Specialist did not come:** after [15] minutes it becomes a specialist no-show and a full refund is proposed.

FLOW 10

After the session

The seeker is asked to rate the session. Stars count at once; a written review waits for staff moderation before it can appear on the profile, and nothing ever shows who wrote it.

Who	The seeker or guest of a completed booking
Screens	Rate your session
Phase	1 · always on

Rate your session

Step by step

1. **Give stars**
   1 to 5, plus what stood out (Felt listened to, Practical tools, Good call quality, On time).
2. **Write a review (optional)**
   Shown on the profile without the person's name, after moderation.
3. **Something went wrong?**
   "Tell the Solace team privately" goes to Support only and is never shown to the specialist.
4. **Book a follow-up**
   Goes straight to booking with the same specialist.

Rules behind this flow

- One rating per completed booking, within [14] days of the session (D37).
- The safety monitor checks every written review first. A review it flags never reaches the queue or the profile, and the crisis team gets an alert.
- Contact details in a review are flagged for staff, who may publish with them masked.
- The specialist may reply once to a published review.

Messages people receive

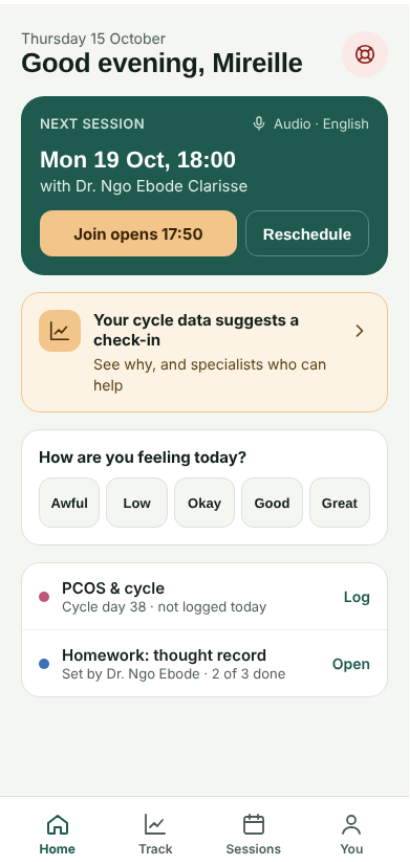

When	Channel	Message (English)
After the appointment	Push	How was your appointment? Tell us in one tap.

FLOW 11

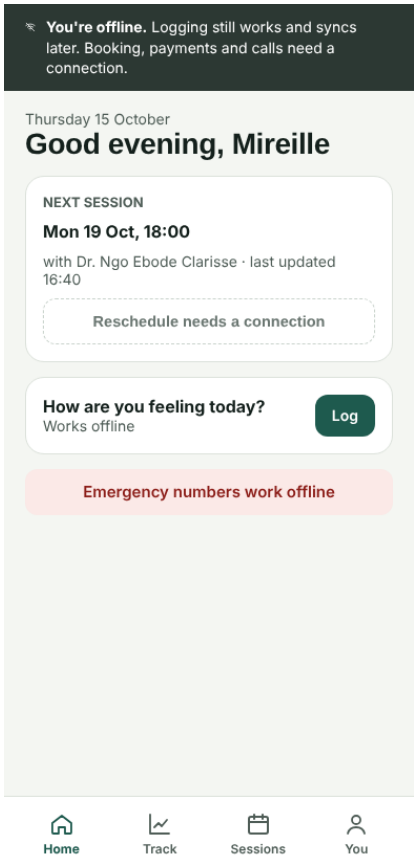

Home

Home shows the date and a greeting, the Urgent help button and the next session with Join and Reschedule. With tracking on it adds the newest pattern, a one-tap mood check-in and the tracked modules; with the companion on, open homework and the safety plan. Offline, it still shows the last next session it saw.

Who	Registered seekers
Screens	Seeker home, Home while offline
Phase	1; tracking needs trackTab and the Health tracking consent; homework and the safety plan need the companion flag

Seeker home (as designed)

Home while offline

Step by step

1. **Next session**
   When it is, with what, and "Join opens 17:50". Join from 10 minutes before; Reschedule.
2. **Nothing booked**
   The way to find a specialist.
3. **The newest pattern (tracking on)**
   For example "Your cycle data suggests a check-in": opens the recommendation, why it was noticed and who can help.

4 **How are you feeling today? (Daily check-in tracked)**
One tap on Awful, Low, Okay, Good or Great logs today's mood, offline too. It can be changed during the day.

5 **Tracked modules**
Each with today's state (logged or not, cycle day), Log today and Trends.

6 **Homework (companion on)**
Each open homework with how many are done; Open goes to the companion.

7 **My safety plan (companion on)**
Opens the plan, which also works offline.

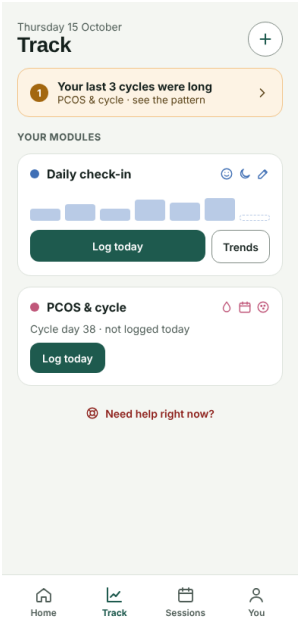

8 **Offline**
A banner says logging still works and syncs later, while booking, payments and calls need a connection. The next session shows with when it was last updated. Emergency numbers work offline.

FLOW 12

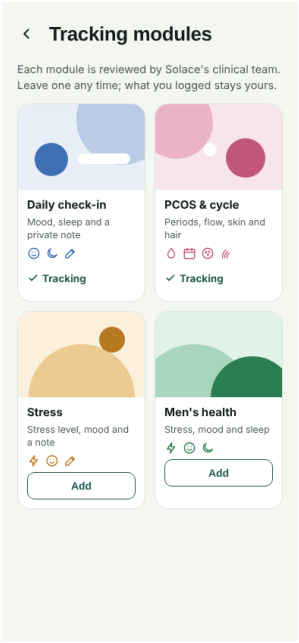

Tracking

With an account and a yes to Health tracking, the seeker adds modules (Daily check-in, PCOS & cycle and any staff publish), logs in about 30 seconds a day, even offline, and sees trends. When a clinician-reviewed rule notices a pattern, the app says what was logged and may suggest a specialist.

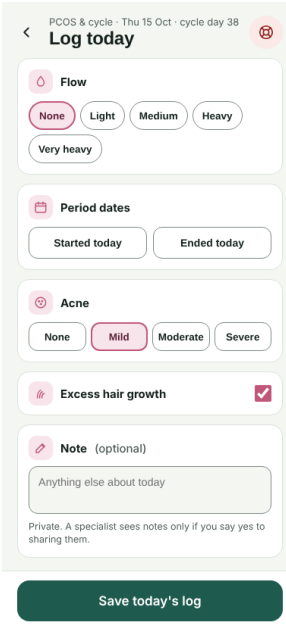

Who	Registered seekers with the Health tracking consent
Screens	Track, Add a module, Log today, Daily check-in, Saved offline, Trends, Recommendation, Not tracking yet
Phase	2 · needs the trackTab flag; AI wording needs aiAssist

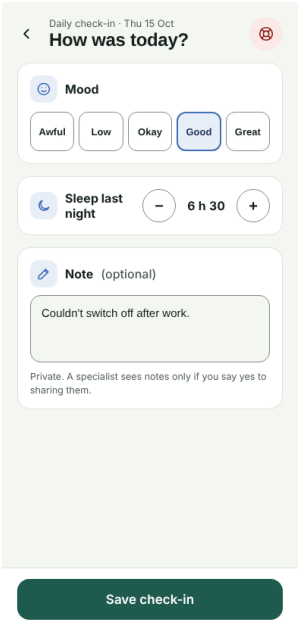

Track

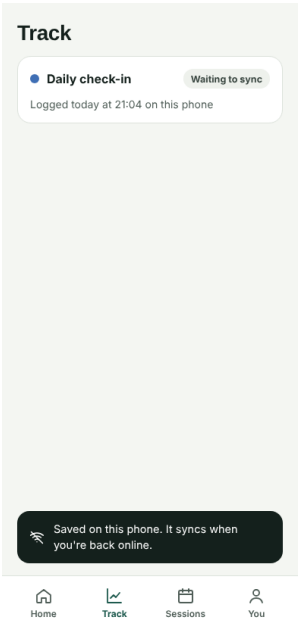

Add a module

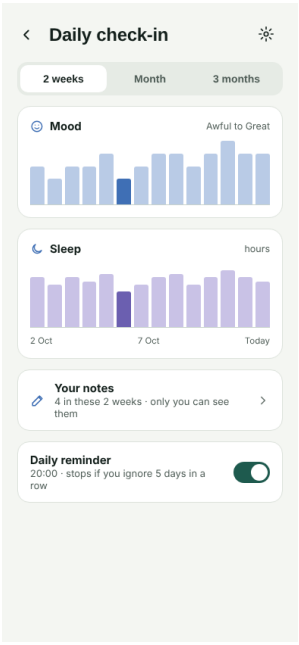

Log today: PCOS & cycle

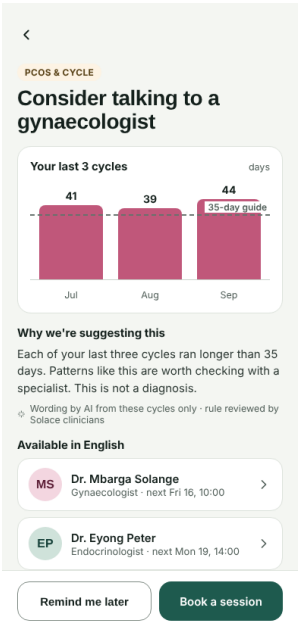

Daily check-in

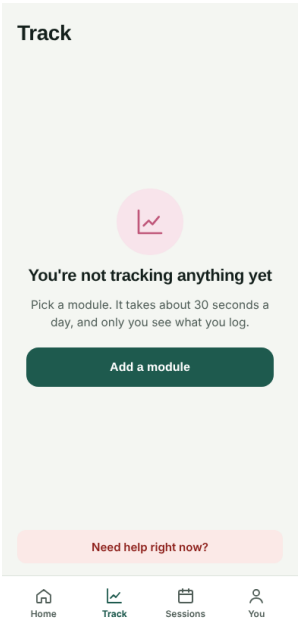

Saved offline

Trends

Recommendation

Not tracking yet

Step by step

1. **Say yes to tracking**
   The Track tab asks for the Health tracking consent before it shows anything.
2. **Add a module**
   Each card says who it is for. Some ask one question when added (for example, trying to conceive). Leaving a module keeps what was logged.
3. **Log today**
   One screen per module, drawn from its elements: mood, sleep, flow, period dates, skin, hair, stress, a private note. Save.
4. **Offline**
   The log is saved on the phone, encrypted, and shows "Waiting to sync" until the network is back.
5. **Trends**
   2 weeks, month or 3 months; the number of notes (only the seeker can see them); the daily reminder.
6. **A recommendation**
   "Your last 3 cycles were long": a chart of what was logged against the rule's guide, why, and "This is not a diagnosis". An invitation lists matching specialists to book. Remind me later or dismiss.

Rules behind this flow

- Tracking states facts and never interprets them: no scores, predictions or diagnoses (D10).
- **Notes are storage only:** no rule reads them, nothing scans them, they are deleted for real when deleted, and a specialist sees them only with a separate yes to sharing notes.
- Rules are written in the admin module builder and approved by a clinical reviewer who did not write them.
- With AI assist on, the explanation may be reworded by AI from the evidence only; the screen then says "Wording by AI from these cycles only · rule reviewed by Solace clinicians". Otherwise it shows the clinicians' wording.
- At most one tracking push a day. After 5 ignored reminders nothing more goes until they log again. A crisis alert pauses nudges for [14] days.
- A specialist can read tracking only with a live booking and a sharing grant, checked on every read and audited.

Messages people receive

When	Channel	Message (English)
Daily reminder	Push	Time to log today.
Pattern or invite	Push	You have something new to look at in Solace.

Not live yet / waiting on a decision

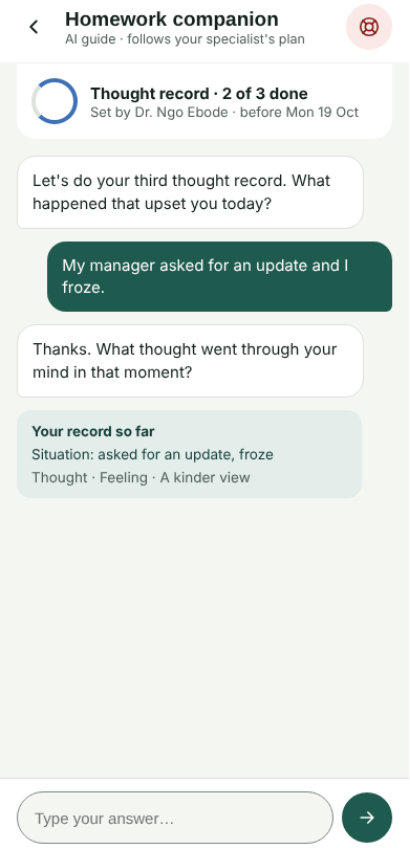

- Launch modules arrive as drafts. Nothing reaches seekers until a clinical reviewer approves and Operations publishes each module (D54).

FLOW 13

Homework and the companion

After a session the specialist can set homework: a thought record, a sleep diary, worry time or their own task. The seeker works through it step by step with the companion, an AI guide that follows the specialist's plan and checks every answer for risk before replying.

Who	Registered seekers whose specialist set homework
Screens	Companion & homework
Phase	4 · needs the companion flag; AI reflections need the COMPANION feature live in AI controls

Companion & homework

Step by step

1. **Open the homework**
   From Home: what it is, how many are done out of how many, who set it and by when, and the specialist's note.
2. **Answer each step**
   A thought record asks for the situation, the thought, the feeling and a kinder view. A sleep diary asks bedtime, wake time and how rested. Worry time asks for the worries. A custom task asks how it went.
3. **Finish a record**
   The companion saves it and says how many are left. When the AI companion is live it may add one or two warm sentences based only on what the seeker wrote and vetted content.

4 **All done**
"That's all of this homework done. You can talk it through at your next session."

Rules behind this flow

- **Every answer passes the safety monitor before any reply.** On a risk signal the companion stops, says urgent help is one tap away, opens Urgent help, and raises an alert in the crisis queue (source COMPANION). That answer is not stored (D57).
- The companion's questions are fixed, bilingual and written for it; a model never asks the questions.
- Answers are encrypted and are the seeker's. The specialist sees only how many records are done.
- Homework is due before the next session, or after [7] days.

Messages people receive

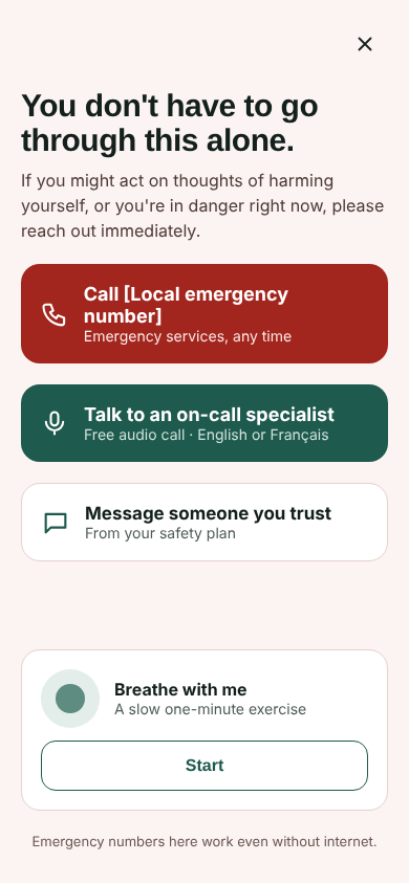

When	Channel	Message (English)
New homework	Push	You have a new task from your specialist.

FLOW 14

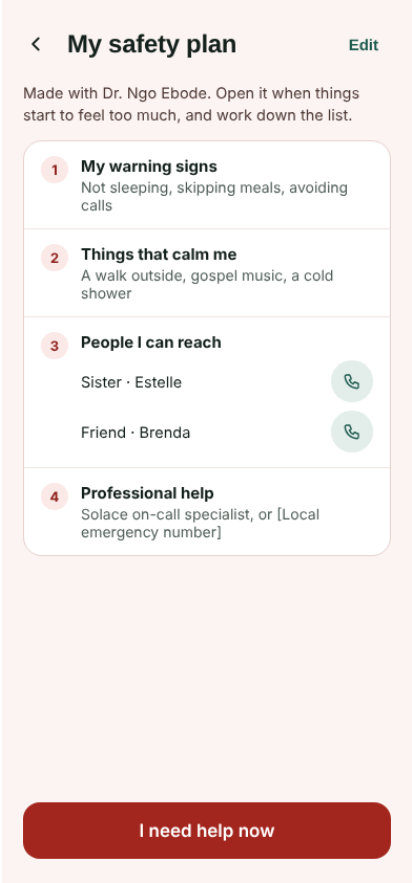

Urgent help and the safety plan

The Urgent help button is on every main screen, works for guests and with no connection, and lists the local emergency numbers. Registered seekers can also keep a safety plan: warning signs, what calms them, people they can reach and professional help.

Urgent help

My safety plan

Step by step

1. **Tap Urgent help**
   One tap from Home, the intro screens and Welcome.
2. **Call a number**
   Cameroon's emergency numbers are inside the app: ambulance (SAMU) 119, police 117, fire 118. When Content publishes a crisis resource, its numbers replace these.
3. **Message someone you trust**
   When the safety plan has people with a phone number, each has a button that starts a text message to them.
4. **Breathe with me**
   A slow one-minute exercise that works offline.

5 **Open My safety plan**
From Urgent help (once a plan exists), Home or the You tab. The four steps; tap to call a person; I need help now goes back to Urgent help.

6 **Make or edit the plan**
Warning signs, things that calm me, up to 5 people (who they are, name, phone), and optionally which of their specialists they made it with.

Rules behind this flow

- Urgent help never depends on AI, a connection or an account (D39).
- The safety plan is encrypted and only the seeker reads or changes it. A copy stays on the phone so it opens offline; signing out removes it (D57).
- The professional help step always shows the emergency numbers the app carries.

Not live yet / waiting on a decision

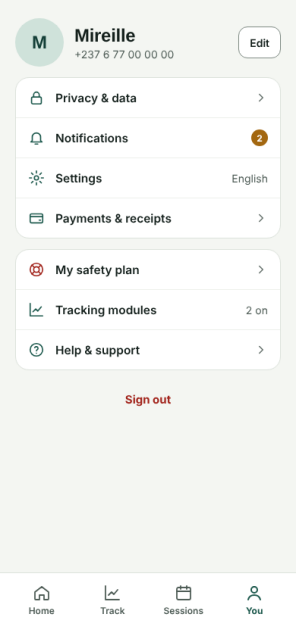

- **Talk to an on-call specialist** stays off until that service is staffed and specified (onCallSpecialistCall flag).
- The emergency numbers need the owner's confirmation before launch.

FLOW 15

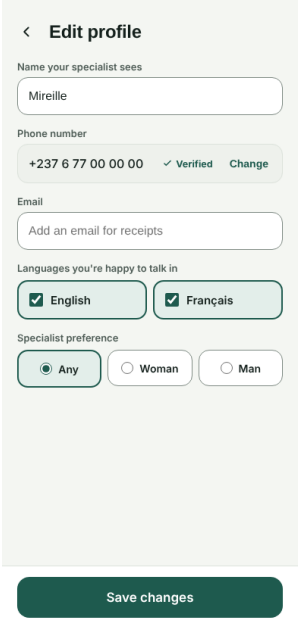

Your account, privacy and settings

The You tab holds the profile, Privacy & data, notifications, settings, receipts, the safety plan and tracking modules. From Privacy & data a seeker changes any consent, downloads a copy of their data or deletes their account.

Step by step

1. **Edit profile**
   The name the specialist sees, session languages and specialist preference. The phone shows as verified; changing a contact needs a code to the new one (not built yet).
2. **Privacy & data: what Solace may do**
   Health tracking, AI assistance, Share summaries with specialists (or Ask me each booking), AI session notes. Each switch is a new consent record.
3. **Download a copy of my data**
   One file of everything Solace holds about them, ready within minutes, downloadable for [7] days through the app only.
4. **Delete my account and data**
   Removes the account, tracking, health check answers, homework and the safety plan. The confirmation explains what is kept by law.
5. **Notifications**
   The in-app inbox, worded like the pushes. Mark all read.
6. **Settings**
   App language; session reminders; tracking reminder time; Discreet notifications (lock-screen shows "You have a reminder" only); Data saver (start video with the camera off).
7. **App lock**
   PIN or fingerprint to open Solace. Turning it on or off asks for the phone's own lock. With it on, Solace asks each time it opens or comes back to the front; Urgent help is still one tap away on the lock screen. The phone needs a screen lock first.

Rules behind this flow

- **Erasure is refused** while a paid session is upcoming or in progress, or a refund is still open, so no money is stranded; the screen says why (D40).
- After erasure only an anonymous tombstone remains for the accounting records; ratings keep their stars but lose their words.
- Quiet hours [21:00]–[07:00]: reminders that can wait are held until morning; session, payment and cancellation messages go at once.

Messages people receive

When	Channel	Message (English)
Data copy ready	Push and email	Your copy of your data is ready. It can be downloaded for [7] days.
Account deleted	Email	Your Solace account has been deleted. We have removed your account and your data, except records the law requires us to keep.

Not live yet / waiting on a decision

- Whether Solace keeps signed session notes after an erasure is an open legal question. For now they are deleted with the account.
